System Title:

St. Rita Mission Station - Wedding Schedule Management System

Description:

St. Rita Mission Station - Church Wedding Hall Schedule System is a small, web-based framework that focuses on filling Church Wedding with less people. They streamline the booking process by providing an online submission system to allow clients to request reservations, thereby minimizing the requirement for on-site visits and physical documents. A centralized system allows administrators to easily manage schedules, confirm wedding requirements, and make bookings orderly and conflict-free. This system features an all-in-one solution for clients and administrators alike at St. Rita Mission Station, improving workflow and providing convenience.

System Type:

- System that Uses a RESTful API

Expected API Integrations: (if you propose System that Uses a RESTful API.)

- **Google Calendar API** – For scheduling and managing wedding reservations.
- **Google Maps API** – To display the church location and nearby landmarks.
- **Email API** – For sending notifications, confirmations, and reminders.
